Natural resources renewable and non-renewable resources

This article is part of an educational series for third and fourth graders. Renewable and nonrenewable resources, forest fire, and recycling are discussed.

Natural resources are material or thing that people use from the earth. There are two type of natural resources the first are renewable natural resources. They are called renewable because they can grow again or never run out they are they second are called nonrenewable natural resources. These are things that can run out or be used up. They usually come from the ground.

Renewable natural resources

Natural renewable resources

Let's look more closely at renewable natural resources. They are the ones that can grow again. Trees are good example of renewable resources. They can regrow.
